

ACADEMIC–INDUSTRY WORKSHOP

Frontiers of AI Mathematical Reasoning:

Capabilities, Limitations, and Paths to Improvement

An academic–industry workshop bringing together researchers from leading AI laboratories and universities to investigate the reasoning capabilities of frontier language models, with particular emphasis on open-weight models.

The workshop will present:

- **Recent industry insights into LLMs for mathematics**, covering training data, reinforcement learning, and harness design.
- **New results from a large-scale, head-to-head benchmarking study of leading models**, highlighting their strengths and limitations.

Building on these findings, researchers from academia and industry will discuss how to collaboratively improve mathematical reasoning systems and identify priorities for future research.

DATE & TIME

Friday, 4 December 2026

09:30–17:30 China Standard Time (UTC+8)

VENUE

The Chinese University of Hong Kong, Shenzhen

2001 Longxiang Boulevard, Longgang District, Shenzhen

Room to be announced

Free registration
